SUMMARY

Full-stack software engineer specialized in Node.js, TypeScript and React, building B2B SaaS products, AI automation and API integrations for startups and small teams that need an MVP running in production fast.

Delivered an end-to-end B2B SaaS MVP that generated 7.5K+ SEO articles (9M+ words) and 22K+ images, reaching 100K+ views and 100+ customers, while maintaining 99%+ uptime through idempotent workflows, retries and structured monitoring. Cut manual production work by ~90% on a US news and content pipeline built with LLM workflows, and currently builds product and engineering for a US media client.

EXPERIENCE

Software Engineer

Apr 2026 - Present

Flatiron Software | Remote, United States

US consultancy, on a remote team serving a Florida media group; stack includes React, Node.js and Google Cloud Platform.

- Designed the shared data contract used by ingestion pipelines to hand records to the API and UI, forward-compatible by construction so new data sources and fields do not break existing consumers.
- Prototyped the supporting PostgreSQL schema and per-source ingest-token model for the lead domain, alongside the team building the pipeline execution engine.
- Owns the UI end to end: migrated it from a legacy Vue app to React and TanStack, then wired it to the backend as endpoints shipped.
- Works directly with US product stakeholders to translate newsroom needs into scoped, sequenced tickets across a 3-person engineering team.
- Built and maintain an internal Python and Claude pipeline that aggregates GitHub, Slack and meeting notes into a reviewed engineering knowledge base, automated via GitHub Actions.

Skills: Engineering, Large Language Models (LLM), Asaas, Web Application Development, Stripe (Software), NestJS, React.js, Amazon Web Services (AWS), n8n, Full-Stack Development, API Testing, GitHub

Software Engineer

Feb 2024 - Apr 2026

Novva Solutions | Remote, Brazil

Builds B2B SaaS MVPs end to end, owning architecture, data model and delivery, with Node.js, TypeScript, React, Next.js and PostgreSQL.

- Reduced manual operational work by automating workflows with Airtable, n8n and third-party integrations.
- Designed production backends with idempotent webhooks, queues, retries and structured logging, making releases more reliable and easier to debug.
- Implemented subscription and billing flows with Stripe and Asaas, including checkout, access control and webhook-driven lifecycle events.
- Owned delivery from data model to production across PostgreSQL, MySQL, migrations, performance tuning, Docker and CI/CD with GitHub Actions, with deployments on Vercel, Railway and AWS.
- Built B2B SaaS MVPs and API integrations with Node.js, TypeScript, React and Next.js.

Skills: Software as a Service (SaaS), Software Development, Full-Stack Development, Large Language Models (LLM), Airtable, Asaas, Data Integration, Application Programming Interfaces (API), Stripe (Software), Continuous Integration and Continuous Delivery (CI/CD), React.js

Software Engineer

Jan 2025 - Aug 2025

Airticles.ai | Remote, Brazil

AI content automation SaaS; built and operated the generation and publishing pipeline, shipping 3 core features end to end.

- Delivered an end-to-end B2B SaaS MVP generating 7.5K+ SEO-optimized articles (9M+ words) and 22K+ images, reaching 100K+ views and 100+ paying customers.
- Maintained 99%+ uptime via production hardening, including retries, idempotent workflows, and structured logging and monitoring.
- Built and maintained 5 external API integrations (OpenAI, Freepik, Pexels, WordPress and n8n) for orchestration and automation.

Skills: Software as a Service (SaaS), Software Development, Full-Stack Development, Large Language Models (LLM), Asaas, Data Integration, Application Programming Interfaces (API), Stripe (Software), Continuous Integration and Continuous Delivery (CI/CD), JavaScript

Venture Capital Analyst, Portfolio Analytics & Automation

Aug 2022 - Feb 2024

Citrino Ventures | São Paulo, Brazil (Hybrid)

Venture capital firm; worked as a portfolio analyst using Python daily for automation and data collection.

- Moved KPI investment reporting from a monthly, ad hoc cycle to a weekly cadence, with Python pipelines that collect, validate and standardize the data.
- Increased reliability of performance analysis by automating recurring KPI monitoring routines and data checks, cutting manual effort.
- Translated business performance into decision-ready insights for internal stakeholders and founders, and supported invested companies with financial and strategic input.

Skills: Software as a Service (SaaS), Venture Capital, Data Integration, Application Programming Interfaces (API), Robotic Process Automation (RPA), Corporate Venture Capital, Problem Solving, OpenAI API, Python

EDUCATION

Bachelor of Engineering, Aeronautical Engineering

Jan 2017 - Dec 2022

USP - Universidade de São Paulo

Bachelor of Engineering, Computer Engineering

Jul 2025 - Jul 2029

UNIVESP

SKILLS

TypeScript, React, Node.js, JavaScript Libraries, Large Language Models (LLM), OpenAI API, API Testing, Webhooks, GitHub, Git, Google Cloud Platform (GCP), Amazon Web Services (AWS), Server Side, Engineering, Web Application Development, NestJS, WordPress, n8n, Asaas, Stripe, MySQL, Financial Modeling

LANGUAGES

English: Fluent | Portuguese: Native
